FENELLA® F 3817-G

Water extendable Hot Forging Release Agent

DESCRIPTION

FENELLA F 3817-G is a high quality graphite aqueous lubricant specially developed for steel hot forging.

FENELLA F 3817-G is a lubricant/release-agent based on water-dispersed graphite for high performance use. Its main application is steel hot & warm forging, but it can also be used for aluminium, copper, titanium & nickel stamping.

FENELLA F 3817-G is applied with success on both mechanical and screw presses, on hammer, even for very severe operations to form difficult pieces.

FENELLA F 3817-G shows an exceptional adhesion at high temperature and forms on the die a film with superior release and lubricating properties due to its graphite parameters content such as particle size and crystal-clear network. The film provides a very good metal flow during deformation at high temperature and no built-up of residual film is left on the die.

FEATURES

- FENELLA F 3817-G owns spraying systems cleaning properties which allows an important decrease in nozzle blocking problems.
- High Quality Graphite used
- Can be used for Non-Ferrous metals
- No build-up of residual film

TYPICAL VALUES

Product Appearance	Black fluid
pH Neat	8.4
Specific Gravity @15°C	1.223 kg/L
Brookfield Viscosity @20°C (SO5—20rpm)	1200 mPa.s
Solid Lubricant:	Synthetic Graphite

HEALTH AND SAFETY

Refer to MSDS for proper handling and disposal. Please note that the MSDS includes handling, health and disposal information which should be passed on to your employees, and to anyone else who comes in contact with our product. Additional advice can also be obtained from your local Houghton representative.

NOTE: Read and understand all precautions on container labels before using this product.

FENELLA® F 3817-G

Water extendable Hot Forging Release Agent

REFERENCES

FENELLA F 3817-G is compatible with materials commonly used by machine tools manufacturers.

HOW TO USE

FENELLA F 3817-G viscosity is suitable for all the kind of dosing systems generally used in forging.

Working concentration of **FENELLA F 3817-G** can vary in function of the specific process.

Basic operations 3-10% in water.

Very severe operations 10-20% in water.

Diluted dispersion is applied by a spray system.
